

It was worth waiting for!

If you have had to cross the Moerdijk Bridge in the direction of Rotterdam in the last few weeks, you must have been held up in a traffic jam. We will not beat around the bush; it was us causing the extra queues. Please accept our sincere apologies for this.

We hope you will find comfort in the result: it was worth waiting for. Together with the Department of Public Works and construction firm TBI Haverkort, we have applied an ultramodern wearing course covering a good 16,000 m². Our new mobile Bolimix wearing course machine makes it possible to apply up to 10,000 m² of synthetic wearing course a day. In the course of the year, a distribution machine will be coupled onto this, so that the application of the [Boliqrip](#)[®] wearing courses can be carried out almost 100 % mechanically. This shows that Bolidt is not only going the extra mile to advance the development of wearing courses, but is also an innovator in the field of application techniques.

The new wearing course on the Moerdijk Bridge makes that the roadway to need far less maintenance. So, as far as we are concerned, that will not be a reason for you to be stuck in a traffic jam anymore!
