bolidt

New revolutionary design possibilities for the cruise industry

Bolideck® Future Teak

As an ecologically operating company Bolidt is devoted to innovation aimed at improving decking systems and introducing new dimensions to the cruise industry. Increasing attention to environmental issues has been at the heart of the innovation- drive in recent years. The introduction of Bolideck® Future Teak has inspired our R&D department together with architects world-wide to new levels of design.

Bolideck® Future Teak has not only become the bench-mark in deck covering, designers are becoming increasingly aware of its potential for other applications. Wall/bulkhead cladding, Deck furniture, Planters, Stair treads and Capping rails (C-Rail®) to name but a few. These applications enable ship owners to emphasize several specific parts of the ship and to make their design and decoration even more exclusive. In addition Bolidt has developed a programmable low energy lighting system Bolideck® High-lights for incorporation into its full product range, including a revolutionary Bolidt helideck lighting / guidance system.

Bolidt Planter

The introduction of Bolideck® Future Teak back in 2005 was a major breakthrough in the effort to combat de-forestation. We feel we have played a decisive role by providing a realistic alternative to traditional teak decking. The Cruise industry has embraced the concept: increasingly more cruise companies are turning to Bolideck® Future Teak for new build and for the renovation of existing vessels. Celebrity Cruises, one of the world's largest cruise lines, recently started a new cruise ship series with a class that has never been shown before: Solstice. Celebrity Cruises latest new-builds are exclusively equipped with Bolideck® Future Teak on a scale hither to unseen. Delivered by the Meyer Werft the five new Solstice class vessels will have a total of some 55,000 m² of Bolideck® Future Teak promenade, pool, balcony and sundecks.
